

PREPARATION FOR WATER-BASED TRIM PRODUCTS

Benefits of the correct preparation

- Enhances adhesion of the top coat of previously painted surfaces
- Helps paint flow better, for a smoother finish
- Paint dries to a consistent sheen
- Helps to improve durability of the top coat

1. Rub down the surface to provide a good key

2. Brush off prepared surface to remove dust

3. Fully stir the paint

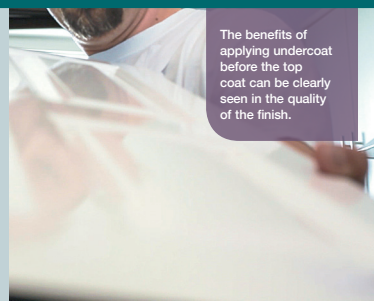

4. Lightly dampen the surface using a cloth

Benefits of undercoating

- Use Dulux Trade Quick Drying Undercoat.
- Best prepares bare wood surfaces.
- Prevents sheen sinkage, so the finish looks better for longer.
- Increases the coverage and durability of the top coat.
- Helps create a perfectly smooth top coat finish.
- Aids application.
- Treat knots with an appropriate knotting solution.
- Any surface defects should be filled with the appropriate Polycell Trade Polyfilla.

APPLICATION OF WATER-BASED TRIM FINISHES

1. For best results, apply with a dampened good quality synthetic brush to reduce any brush marks...

OR

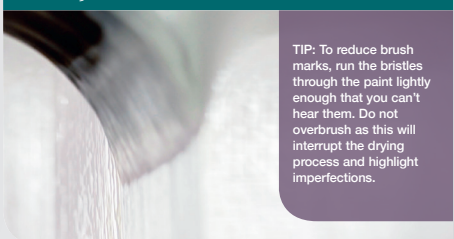

...a medium woven pile roller

2. Using your selected tool, lay the paint on evenly in all directions

3. Lay the paint off to remove any brush or roller marks

4. After laying off, clean your brush in water

5. Once completed, the top coat looks like a solvent-based but dries like a water-based

A Guide to using water-based paints for trim and wood inside and out

WATERWAY

The end user will benefit: water based products offer clear advantages

Quick drying

Non yellowing

Low odour

Safer to use

Better for the
environment

Timber behaves differently inside and outside, and so do our paints

WORKING INSIDE

- Fast drying to complete the job quick.
- Low odour.
- Tough Hard Finish, Scuff and Grease resistant.
- Waterbased – Sustainable Products.
- Satin/Gloss/Eggshell Finish.

WORKING OUTSIDE

- Timber expands and contracts in heat and cold – so does our exterior Weathershield Satin and Gloss paint!
- Interior and 'hybrid' products can crack with expansion and contraction.
- UV resistance is critical.
- Tough finish to withstand knocks.
- Mould inhibitors for increased durability.
- Satin/Gloss Finish.
- Superior coverage – Our Weathershield Trim range gives 20% more coverage than standard WB trims.

Dulux Trade Diamond Satinwood

"I want to use water-borne paints on interior wood and metal because it means that I can complete the job in less time, it's also better for the environment.

But my reputation is important and in the past these paints have not delivered the quality my customers expect."

Diamond Satinwood has a unique latex with 'cross linking technology' that allows us to have a paint that is 100% waterborne, but can be worked more like a solventborne. This unique latex also gives it a Diamond tough finish.

Post application. Will the whiteness last?

Trim paints will typically yellow in the dark and in warm temperatures. Dulux Diamond Satinwood retains its whiteness to keep that crisp white look for longer.'

White index over time at 40°C/dark

INTERIOR

THE QUICKER WAY TO FINISH TWO PERFECT COATS IN ONE DAY

Not 100% convinced water-based paints are up to the job? Then take a look at the brilliant results you'll enjoy with our complete range of water-based undercoat, satinwood and gloss paints. Best results when applied over Dulux Trade Quick Drying Undercoat.

DIAMOND SATINWOOD

- Durable finish
- Superior application
- Stain, human grease & finger mark resistant
- Water-based paint = ready to recoat in 6 hours*
